

# Flatter masks are less stable — entropy vs split-half agreement, pooled over sparsity settings

entropy of the 24-window mean mask  
 $\rho -0.201$  95% CI  $[-0.423, +0.045]$

mean per-window entropy  
 $\rho -0.173$  95% CI  $[-0.394, +0.051]$
